## PROFILE

Software Developer and IT professional approaching 3 years of commercial experience. Creative problem solver. Proven track record of success in developing, deploying, updating and maintaining full-stack web-based solutions and applications. Experience in developing Azure cloud-based solutions. Comfortable developing for both Windows and Linux based systems. Understanding and experience in Agile development. Keen and friendly, always ready to learn and learn from peers. Never afraid to take on a challenge learn something new.

## JOB EXPERIENCE

### Fullstack Developer

Ascenti  
*Physiotherapy Services Company*

February 2021 - Present  
Remote

- Designed, developed, maintained and updated over 30 web based C# .NET Projects that make up the internal patient management system.
- Created an ASP.NET Core API and Vue Dashboard for external business customers to access and provide data for 100's of files per week.
- Designed and implemented a robust Azure Function App-based API leveraging SendGrid to efficiently manage and distribute email communications to patients.
- Revamped outdated web applications with modern .NET technologies such as Blazor and ASP.NET Core, and modern JavaScript in React and NextJS - together both improving usability, performance and security.
- Maintained and improved existing web applications and services built with various versions of .NET Framework (.NET, .NET Framework, ASP.NET), as well as their JavaScript & JQuery frontends.
- Managed MSSQL Servers writing stored procedures for apps, jobs, scripts for content and performed diagnosis via extended events and audits.
- Onboarded an online therapy platform bought by the company comprised of a Laravel API and 3 Vue apps all hosted on AWS.
- Developed a calendar for viewing the availability of therapists and clinics. This utilized React and NextJS for a more efficient, less clunky feel that the previous app, along with faster load times provided by NextJS's inherent caching and SSR.
- Vastly improved the deployment process by implementing CI/CD azure pipelines, aligned to a gitflow approach, for each active web project making for safer deployments and easy rollbacks.
- Provided regular mentoring and training for 3 members of staff, and less regular training for others, on various technologies and complex areas of the system, improving both the individual skills of the team and the culture of knowledge sharing as a whole.
- Provided regular demos to company executives on the progress of the teams work during sprints.
